

# AGRIFORCE BK T71

PRODUCT DATA SHEET

# BKT AGRIFORCE BK T71

AGRIFORCE BK T71 is BKT's brand-new rubber track series for high-power tractors employed in general tillage and row crop applications. The tread is made of a high-performance compound that ensures maximum resistance against cuts, tears, and abrasion. The optimized tread pattern provides excellent traction and ride comfort, whereas the drive lugs of the positive drive system have an optimized shape for best flexibility. In addition, the track carcass has been reinforced with four layers of high-tensile steel cords. As a result, AGRIFORCE BK T71 offers the perfect balance of high dimensional stability and flexibility to ensure extraordinary durability in all seasons. Farming tracks have no metal core, a feature that improves flexibility especially on wet and soft soil. The overall advantages of rubber tracks are enhanced productivity and performance since track-driven tractors can run at higher speeds on field at the same power and show improved fuel efficiency.
